SUMMARY

Product engineer with 7+ years building operational software across enterprise AI, regulated onboarding, and founder-led products. At Rely, I lead product and engineering for a Spanish-first workspace where LATAM founders form and operate US companies. I built the customer dashboard and operations queue behind 50+ formations and 6+ external integrations, working directly with founders and operators through discovery, implementation, and support.

EXPERIENCE

Co-founder - Rely (company operations platform) Feb 2024 - Present

- Lead product and engineering for a Spanish-first workspace where LATAM founders form and operate US companies; 50+ formations completed through the production system.
- Mapped filings, payments, banking, documents, deadlines, and support into one customer dashboard and one operations queue across 6+ external integrations.

Stack: React, TypeScript, Kotlin, Spring Boot, PostgreSQL, Auth0, Stripe, Docker, Cloudflare R2.

Co-founder - Acelera (AI implementation studio) Jan 2026 - Present

- Turn broad enterprise AI briefs into stakeholder interviews, workflow maps, scoped internal-tool prototypes, and a defined pilot proposal.
- Prototype bounded TypeScript/Python dashboards, integrations, and automations while documenting owners, constraints, and the next implementation decision.

Stack: TypeScript, Python, REST APIs, dashboards, automation, LLM integrations.

Full Stack Developer - Aivo (enterprise conversational AI) Nov 2021 - Jul 2024

- Built the Angular configuration dashboard that let non-technical enterprise teams control chatbot behavior without engineering support.
- Worked with leadership on product, UX, and priorities; owned unit, end-to-end, and visual-regression coverage with Karma, Cypress, and Percy.

Full Stack Developer - HSBC (regulated banking onboarding; concurrent role during 2021-2022) Dec 2020 - Nov 2022

- Built biometric capture and identity-verification flows in Angular and Java Spring Boot under bank-grade reliability constraints.

Full Stack Developer - Ford Argentina (LATAM parts and logistics) May 2019 - Dec 2020

- Maintained regional parts-management software and migrated AngularJS modules to Angular 8 while the operational system remained in use; also worked on Java services and SQL-heavy features.

SELECTED PROOF

- Rely** - Customer and operations software behind 50+ US company formations and 6+ external integrations.
- Timba** - Implemented the web verifier and Telegram wallet and game UX for a Solana product backed by public contracts and a commit-reveal oracle flow.
- Acelera** - Enterprise interviews and workflow discovery that produced scoped prototypes and a defined pilot proposal.
- Lemon Box** - Turned a generated reference into 30 ESP32-S3 market displays; owned firmware, hardware integration, printing, and assembly.

SKILLS

LANGUAGES	TypeScript, Python, Java, SQL
AI / LLM	LLM integrations, local inference with Qwen/llama.cpp, prompt pipelines
BACKEND	FastAPI, Kotlin, Spring Boot, Next.js API routes, REST APIs
FRONTEND	React, Next.js, Angular
DATA & INTEGRATION	PostgreSQL, Auth0, Stripe, third-party APIs
DELIVERY	Docker, Cloudflare R2, workflow discovery, process mapping, runbooks, stakeholder communication

EDUCATION & LANGUAGES

Technical diploma in Information Technology Escuela Técnica Nuestra Señora del Valle | 2017

Additional coursework CS50 (self-directed), Platzi Software Development

Languages Spanish (native), English (professional working proficiency)
